PROFESSIONAL SUMMARY

Versatile **Software Developer** with a strong technical foundation in Python, JavaScript, automation, full-stack web development, and test engineering. Proven track record of high-performance delivery in competitive hackathons (top 3 finishes). Proficient in leveraging Playwright, Node.js, Express.js, and modern AI development workflows to build robust applications, web scrapers, and test automation suites.

TECHNICAL SKILLS

Core Languages & Backend: Python (Advanced), JavaScript (Node.js/ES6), Java, HTML5/CSS3, Express.js, REST APIs, SQLite3, SQL

Automation & Testing: Playwright, BeautifulSoup4, End-to-End (E2E) Testing, Playwright UI Mode (`--ui`), Defect Logging & Bug Reporting

Tools & Frameworks: Vite, React, ExcelJS, csv-stringify, IGDB API, Git/GitHub, AI CLI Tools / AI-Assisted Development

Domain Knowledge: Web Scraping Pipelines, Real-time Data Handling, Traffic Simulation (SUMO), Rapid Prototyping

PROJECTS

Regional Video Game Price Aggregator (DesiCheapShark) *Python, Playwright, BeautifulSoup4, IGDB API*

- Engineered a Python scraping and automation engine using **Playwright** and **BeautifulSoup4** for real-time INR pricing.
- Automated browser sessions to bypass dynamic content on Steam and Epic Games Store; normalized data via IGDB API.

Full-Stack CRUD Inquiry System & Data Exporter *Node.js, Express.js, SQLite3, Vanilla JS*

- Engineered a RESTful backend using **Node.js** and **Express.js** with **SQLite3** for lightweight relational data persistence and custom SQL queries.
- Built dynamic data-export utilities supporting **JSON**, **CSV** (via `csv-stringify`), and **Excel** (via `exceljs`) with stream-based client-side Blob downloads.
- Implemented an interactive, responsive frontend using **HTML5**, **CSS3**, and **Vanilla JavaScript** (Fetch API) for real-time DOM updates.

SalesSequencer | Automated CRM Lead Ingestion & Outreach Pipeline *Node.js, Express.js, SQLite, Resend API*

- Engineered an automated lead capture and qualification pipeline using **Node.js** and **Express.js** with an embedded **SQLite** relational database.
- Designed a dynamic scoring algorithm computing real-time intent metrics based on prospect interest level and acquisition channel (Web Form, Google Ads, Facebook Ads).
- Implemented conditional lead routing and multi-channel sequencing, dispatching high-intent leads to regional sales reps and triggering personalized emails via **Resend API**.

HACKATHON ACHIEVEMENTS

- **1st Place | METAVERSE '25:** MSHack – Traffic prediction system using SUMO and Python analytics.
- **2nd Place | VEXORA '26:** Electro Wizard – AI-powered electrical grid management dashboard.
- **3rd Place | GEN Z HACKATHON:** Automated pothole detection using Computer Vision & AI reporting.

EDUCATION

Bachelor of Computer Applications (BCA) Expected 2027
Saveetha College Of Liberal Arts and Sciences **9.36 CGPA**

ADDITIONAL INFORMATION

- **AI-Native Developer:** Specialize in leveraging AI CLI tools to augment engineering and rapidly deliver complex solutions.
- **Logic-First Approach:** Focus on robust architecture, clean implementation, and comprehensive automated validation.
